Isolasi Senyawa Karantin

Ditimbang sejumlah 150 gram serbuk buah pare dan dicampur dengan pelarut petroleum eter secukupnya hingga rata dan cukup basah untuk menghilangkan lemaknya, selanjutnya massa tersebut dipindahkan ke dalam perkolator. Etanol 96% dituang lagi hingga cairan penyari berada 2-3 cm di atas massa serbuk. Selanjutnya bagian atas perkolator ditutup dengan cairan penyari yang berada di dalam perkolator didiamkan selama 24 jam. Setelah itu, kran perkolator ditutup. Perkolat ditampung dengan kecepatan sekitar 1 ml/menit dan secara bertahap ditambahkan etanol 96% secukupnya dengan kecepatan sama hingga perkolat yang ditampuh sudah tidak berwarna pekat. Ekstrak cair yang diperoleh selanjutnya dikeringkan engan menggunakan *vacuum evaporator* sampai diperoleh ekstrak kental. Ekstrak kental dibasakan dengan larutan KOH hingga diperoleh PH=10. Ekstrak kental tersebut didiamkan selama dua hari, diencerkan dengan aquades, diekstraksi kembali menggunakan eter.

Fase eter ditampung dan dicuci berturut- turut dengan aquadest, HCl 5%,dilanjutkan dengan aquaest lagi. Jika masih terdapat sisa aquadest dalam fase eter ditambahkan natrium sulfat anhidrat, kemudian diuapkan higga kering. Residu direkristalisasi dengan menggunakan etanol 96%. Kristal karantin yang diperoleh dengan menetapkan harga Rf, indeks bias, dan titik lebur (Darsono, FL., 2006).

The Model F-value of 63660000.00 implies the model is significant. There is only a 0.01% chance that a "Model F-Value" this large could occur due to noise.

Values of "Prob > F" less than 0.0500 indicate model terms are significant. In this case Linear Mixture Components, AB, AC, BC, ABC are significant model terms.Values greater than 0.1000 indicate the model terms are not significant. If there are many insignificant model terms (not counting those required to support hierarchy),model reduction may improve your model.

The Diagnostics Case Statistics Report has been moved to the Diagnostics Node.

In the Diagnostics Node, Select Case Statistics from the View Menu.

Proceed to Diagnostic Plots (the next icon in progression). Be sure to look at the:

1) Normal probability plot of the studentized residuals to check for normality of residuals.

2) Studentized residuals versus predicted values to check for constant error.

3) Externally Studentized Residuals to look for outliers, i.e., influential values.

4) Box-Cox plot for power transformations.

If all the model statistics and diagnostic plots are OK, finish up with the Model Graphs icon.
