

## CHAPTER V

### CONCLUSION AND SUGGESTION

#### 5.1 Conclusion

The purpose of the study is to find out the students opinion towards the obstacles of online learning. The total numbers of the participants are 30 (thirty) students of SMPN 1 Wonosari. The thirty participants were asked to fill the questionnaire that was conducted via Google form. Then, the researcher chooses 5 participants out of 30 to be interviewed. The researcher categorizes the obstacles into five, the teaching and learning process, learning media, technical problems, social interaction, and student academic performance.

The researcher examines the research data and classify the answer to the main problem of this study after doing the research. According to the results, almost a half of the total participants had experience in facing the online learning obstacles. The participants had various opinion towards the online learning obstacles. Some of the major obstacle were influenced by their personality and their own preference to learn. The successful learning can be seen from the student academic performance. This study implies that online learning gives challenges for the students, how they adapt with this situation and they also feel the benefit of learning.

#### 5.2 Suggestions

According to the findings of the study, the researcher would like to mention several suggestions to the teacher, students, and further researchers.

### **5.2.1. Suggestion for Teacher**

The researcher suggests that the teachers explore the teaching and learning media. It can help to increase their willingness to join the class. Teacher also expect to give the learning activity which allows the students to share ideas and to keep them interact with other students.

### **5.2.2 Suggestion for the Students**

The researcher suggests that the students to be active in class when there are materials which have not been discovered. The students are expected to reduce the feel curiosity when they want to ask to the teacher. It will help them improve the academic performance.

### **5.2.3. Suggestion for the Further Researcher**

The researcher would like to give suggestions regarding this study for future researchers. This study is only investigating the students' opinion on online learning. The teacher' role is only to guide the students to fulfill the research data and give several information asked by the researcher. For further researchers, hopefully they can add the teacher's opinion towards online learning to explore the obstacles of online learning.
