

BAB V

KESIMPULAN DAN SARAN

5.1. Kesimpulan

Dari penelitian yang di lakukan dapat ditarik kesimpulan :

1. Penambahan jumlah katalis TBAB dapat meningkatkan rendemen hasil sintesis metil isoeugenol tapi penambahan katalis TBAB yang berlebih dapat menurunkan rendemen hasil sintesis metil isoeugenol.
2. Jumlah penambahan TBAB yang menghasilkan metil isoeugenol terbesar dicapai pada penambahan TBAB 20 mol%.

5.2. Saran

Perlu pertimbangan pada penggunaan metode ini mengenai cara pemisahan metil isoeugenol dan metil eugenol agar dapat diperoleh metil isoeugenol yang murni.
