

## **BAB 5**

### **KESIMPULAN DAN SARAN**

#### **5.1. Kesimpulan**

Berdasarkan hasil *Design Expert* terhadap mutu fisik granul pembawa didapatkan formula optimum yaitu formula dengan kombinasi crospovidon 3,11 gram dan manitol sampai 154,25 gram.

Persen pelepasan obat dilakukan terhadap campuran interaktif dengan dan tanpa granul pembawa, sediaan kapsul merk dagang dan metode granulasi basah pada menit ke 2 berturut-turut  $96,19 \pm 2,11$ ;  $80,19 \pm 0,37$ ;  $38,63 \pm 3,80$  dan  $90,71 \pm 3,40$ . Homogenitas kadar piroksikam campuran interaktif dengan granul pembawa lebih homogen ( $KV < 2\%$ ) dibandingkan dengan campuran interaktif tanpa granul pembawa ( $KV > 2\%$ ). Campuran interaktif dengan granul pembawa yang menggunakan manitol sebagai pembawa larut air dan crospovidon sebagai superdisintegran dapat meningkatkan laju disolusi dan homogenitas kadar piroksikam.

#### **5.2. Saran**

Penelitian campuran interaktif dengan granul pembawa dapat dilanjutkan menjadi sediaan tablet atau kapsul untuk melihat pada bentuk sediaan mana memberikan pelepasan yang lebih baik.
