

BAB 5

KESIMPULAN DAN SARAN

5.1 Kesimpulan

Berdasarkan kajian literatur pada 12 artikel ilmiah terkait efektivitas dan efek samping penggunaan Vonoprazan terhadap pasien yang terinfeksi *Helicobacter pylori* dapat disimpulkan bahwa:

1. Vonoprazan dengan rentang dosis 20-40 mg yang diberikan selama 7-14 hari lebih efektif secara signifikan baik dalam kombinasi *dual*, *triple* atau *quadro therapy* dibandingkan dengan PPI dalam eradikasi *Helicobacter pylori*.
2. Dua artikel melaporkan bahwa kejadian efek samping obat yang terjadi pada PPI lebih tinggi dibandingkan Vonoprazan sedangkan sisanya artikel lainnya melaporkan bahwa efek samping obat yang terjadi antara PPI dan Vonoprazan hampir sama sehingga Vonoprazan aman digunakan untuk penggunaan jangka panjang.

5.2 Saran

1. Perlu dilaksanakan meta-analisa untuk melihat signifikansi hasil dari beberapa penelitian dengan karakteristik maupun luaran hasil yang sama agar memperoleh paduan data secara kuantitatif mengenai efektivitas dan efek samping penggunaan terapi Vonoprazan.
2. Perlu dilakukan penelitian lebih lanjut mengenai efektivitas Vonoprazan pada populasi non-Asia karena tempat penelitian dari sebagian artikel pada hasil penelitian dilakukan di Jepang.
