

BAB 5

KESIMPULAN DAN SARAN

5.1. Kesimpulan

1. Pemberian senyawa asam 2-(3-(klorometil)benzoiloksi)benzoat berpengaruh menurunkan agregasi platelet pada uji *immuno-flow cytometry* ditunjukkan dengan jumlah rata-rata %total yang lebih rendah dibandingkan kontrol negatif dan kontrol positif dan secara statistik memiliki perbedaan yang signifikan bila dibandingkan dengan kontrol negatif dan kontrol positif.
2. Pemberian senyawa asam 2-(4-(klorometil)benzoiloksi)benzoat berpengaruh menurunkan agregasi platelet pada uji *immuno-flow cytometry* ditunjukkan dengan jumlah rata-rata %total yang lebih rendah dibandingkan dengan kontrol negatif dan kontrol positif, dan secara statistik memiliki perbedaan yang signifikan bila dibandingkan dengan kontrol positif namun tidak pada kontrol negatif.

5.2. Saran

1. Melakukan uji pra klinis lanjutan dengan hewan coba tikus dengan kondisi penyakit metabolik (seperti penyakit jantung) sebagai representasi target kegunaan obat di dunia kesehatan.
