

BAB V

KESIMPULAN DAN SARAN-SARAN

5.1. Kesimpulan

Berdasarkan hasil analisis data secara statistik yang diperoleh, maka dapat disimpulkan bahwa pemberian methisoprinol dengan dosis 50 mg/kgBB/hari dan dosis 60 mg/kgBB/hari tidak memberikan efek peningkatan IgM serum yang bermakna.

5.2. Saran-saran

Dari hasil pengamatan terhadap pemberian methisoprinol pada subyek penderita tuberkulosis paru aktif dapat diberikan saran yaitu perlu dilakukan penelitian lebih lanjut dengan penambahan jumlah subyek untuk mengurangi variasi data dan penelitian dapat dilanjutkan dengan mengukur kadar limfosit dan interferon (IFN).
