

BAB V

KESIMPULAN DAN SARAN

5.1. Kesimpulan

Berdasarkan hasil analisis data secara statistik yang diperoleh maka dapat disimpulkan bahwa :

1. Pemberian methisoprinol dengan dosis 50 mg/kgBB/hari dan 60 mg/kgBB/hari memberikan efek peningkatan kadar IgG serum yang bermakna antara sebelum perlakuan (hari ke-0) dan sesudah perlakuan (hari ke-15).
2. Tidak terdapat perbedaan peningkatan yang bermakna antara perlakuan pemberian methisoprinol dosis 50 mg/kgBB/hari dan 60 mg/kgBB/hari.

5.2. Saran-saran

1. Perlu dilakukan penelitian lebih lanjut dengan penambahan jumlah subyek untuk mengurangi variasi data.
2. Perlu dilakukan penelitian lebih lanjut dengan penentuan IgG spesifik terhadap tuberkulosis.
3. Perlu dilakukan pengkajian kembali dosis yang diberikan.
